HOW TO CALCULATE HANDICAPS for BETTERBALL MATCHPLAY

- **Work out your Individual Course Handicap and convert it to 90% which gives your Playing Handicap**
- **Once all 4 Players have done this you then work out the shots from the lowest player at 100%**
- **Don't forget the maximum handicap for all Winter League Matches is 18**

EXAMPLE

- **Player 1 has a Playing Handicap of 7**
- **Player 2 has a Playing Handicap of 9**
- **Player 3 has a Playing Handicap of 16**
- **Player 4 has a Playing Handicap of 23**
  Shots would then be as follows at 100% as the reduction to 90% has already been calculated at the start of the process

- **Player 1 would play off scratch**
- **Player 2 would receive 2 shots**
- **Player 3 would receive 9 shots**
- **Player 4 would receive 11 shots as he/she becomes Max 18 Playing Handicap**
